New Pool Management Program Launches

Aquatic Safety Research Group recently launched two new pool operator/manager certification programs: Practical Pool Management and Practical Pool Management Plus. The first is an intensive, one-day course designed to highlight “the most important topics in pool operations, maintenance and safety,” said Tom Griffiths, Ed.D., one of the programs developers. The short format is aimed at HMAC pool operators, he added. Attorney Shawn DeRosa, another co-developer, said that the Plus option is a two-day course that offers “a more in-depth look at pool and spa operations and management.” According to the group in State College, Pa., the Plus program’s certification is valid for five years for those needing to meet state and local certification/training requirements. More information on each program and its requirements are available at www.aquaticsafetygroup.com.
